

Learning Vim from Emacs + Evil

Jaden Manacsá

February 5, 2016

Outline

Why Emacs?

- ▶ Many of you are probably asking why Emacs and not Vi(m).
- ▶ It's just that Emacs is a RREEAAALLY good editor.
- ▶ Also, Emacs has some advantages.
 - ▶ Org-mode (Organize your life in plain text!)
 - ▶ Async
 - ▶ Magit (A git porcelain)
 - ▶ Vi emulation mode (EVIL-mode)

Starting EMACS

- ▶ Install Emacs for your Operating System.
 - ▶ Windows
 - ▶ MacOSX
 - ▶ Unix based systems (Linux, BSDs)
 - ▶ Get it from your package manager
 - ▶ Compile it from source
- ▶ Optional: Remap Left Control to Caps Lock

Emacs Survival Keys

- ▶ Control Keys
 - ▶ C-n: Move down
 - ▶ C-p: Move up
 - ▶ C-f: Move forward one character
 - ▶ C-b: Move back one character
 - ▶ C-g: Cancel stuff (Emacs' get me outta here key)
 - ▶ C-x k: Press Ctrl then k to 'kill' or delete the current text you are editing
 - ▶ C-x o: Rotate between windows
 - ▶ C-x 2: Create a horizontal split (window)
 - ▶ C-x 3: Create a vertical split
- ▶ 'Meta' or Alt keys
 - ▶ M-x: Calls the 'minibuffer' where you can call Emacs functions

What are MODES

- ▶ Emacs calls plugins MODES
 - ▶ A MAJOR mode can change the current editing environment such as font locking (syntax highlighting)
 - ▶ Python Mode
 - ▶ Org Mode
 - ▶ A MINOR mode is just a small change that does not change the overall behavior of editing
 - ▶ Nyan Mode
 - ▶ Auto-Complete mode

Installing EVIL mode

- ▶ Emacs has a very impressive vim emulation mode called EVIL
 - ▶ Evil stands for Extendable VI Layer
- ▶ Evil can be installed through the Emacs Package manager (package.el)

Installing EVIL mode (cont.)

- ▶ Load up EMACS
- ▶ Hold ALT (META) then X
- ▶ Release Keys
- ▶ Type find-file
- ▶ In the minibuffer that says "Find File:"
 - ▶ TYPE ~/.emacs.d/init.el:
- ▶ TYPE:

Installing EVIL mode (cont.)

- ▶ Save and quit with C (Control) x, then C-c
- ▶ Restart EMACS
- ▶ Hold ALT (META) then X
- ▶ Type in "package-install" without quotes
- ▶ Type "evil"

Installing EVIL mode (cont.)

- ▶ Hold ALT (META) then X
- ▶ Release Keys
- ▶ Type find-file
- ▶ In the minibuffer that says "Find File:"
 - ▶ TYPE ~/.emacs.d/init.el:
- ▶ In your init.el file insert:
 - ▶ (require 'evil) (evil-mode)
- ▶ Done

After installing EVIL mode

- ▶ RET -> Return or Enter
- ▶ "package-install" these packages:
 - ▶ which-key (M-x RET which-key)
 - ▶ evil-tutor (M-x RET evil-tutor)
- ▶ Add to your init:
 - ▶ (require 'which-key) (which-key-mode)
- ▶ You can call the tutor with:
 - ▶ M-x RET evil-tutor-start RET

Learning Vi

Vi basics

- ▶ Note: Learn from usage not memorization
- ▶ Exit from emacs
 - ▶ : (colon keys; ex-mode)
 - ▶ wq(a) -> Write and quit all buffers
 - ▶ q(a)! -> Quit (all) buffers without saving
- ▶ Motion Keys
 - ▶ 'h' -> Move left
 - ▶ 'j' -> Move down
 - ▶ 'l' -> Move right
 - ▶ 'k' -> Move up
- ▶ Editing Keys
 - ▶ 'i' -> Switch to INSERT mode (put characters in)
 - ▶ '<ESC>' -> Return to NORMAL mode

Vi Motions and Objects

- ▶ Vi(m) changes what it edits depending on keys pressed before the modifier
- ▶ The format for this is:
 - ▶ [number] [modifier (such as d{elete})] [object] OR [modifier]
[number] [object]
- ▶ Modifiers
 - ▶ d(elete)
 - ▶ c(hange)
- ▶ Objects
 - ▶ w -> (w)ord
 - ▶ \$ -> end of line
 - ▶ 0 -> beginning of line
- ▶ Example
 - ▶ d -> delete
 - ▶ dw -> (d)elete (w)ord
 - ▶ d\$ -> (d)elete to end of line

Vi Motions and Objects (cont.)

- ▶ Exeptions
 - ▶ There are some exceptions
 - ▶ `dd` -> delete whole line
 - ▶ However these exceptions can be acted upon with numbers still
 - ▶ `2dd` -> delete 2 whole lines

Editing text

- ▶ Deletion (d)
 - ▶ dw -> (d)ele~~t~~e (w)ord
 - ▶ d\$ -> (d)ele~~t~~e to end of line
 - ▶ dd -> (d)ele~~t~~e whole line
- ▶ Recovery (misc.)
 - ▶ 'u' -> undo
 - ▶ '<CTRL>-R' -> redo
 - ▶ 'p' -> (p)ut last deletion at point
 - ▶ 'r' -> (r)eplace character
- ▶ Changing text (c)
 - ▶ 'c' is used in conjunction with motions and objects
 - ▶ (c)w -> (c)hange word [delete word and go to insert mode]
 - ▶ (c)\$ -> (c) to end of line
 - ▶ (c)0 -> (c)hange to beginning of line

Moving around in a buffer

- ▶ : (colon)
 - ▶ (N) -> Go to N line
- ▶ Go (g)
 - ▶ 'G' -> bottom of buffer, (G)utter
 - ▶ 'gg' -> Be(gg)inning of buffer:
 - ▶ If prepended with a number, you go to that number
 - ▶ 'N [a number] gg' go to line N
- ▶ Search (misc.)
 - ▶ '/' -> Search for characters
 - ▶ 'n' -> Search forward
 - ▶ 'N' -> Search backwards
 - ▶ '%' -> find matching),], or },

Colon commands

- ▶ : (colon)
 - ▶ (:s (S)ubstitute
 - ▶ (:s)/old/new -> Substitute first 'old' with new on current line
 - ▶ (:s)/old/new/g -> Substitute all 'old's on new on current line
 - ▶ :#, #s/old/new/g -> Substitute 'old' with 'new' on lines # to #
 - ▶ (:)%s)/old/new/g -> Substitute 'old' with 'new' on all of buffer
 - ▶ (:%s/old/new/g)c -> Ask for confirmation
 - ▶ (:)! Execute external command(!) [Finally{!}]
 - ▶ Commands go to your shell
 - ▶ Windows = cmd.exe
 - ▶ ^nix variants = /bin/(*)sh
 - ▶ Obscure OSes (Haiku, Temple Os{?!?!}) = ^\()_/\^
 - ▶ Example
 - ▶ (:)!ls or (:)!dir -> list files
 - ▶ (:)#, # w FILENAME -> Selective write
 - ▶ Write only lines # to #
 - ▶ (:)r FILENAME -> Insert file FILENAME at point

Editing text (The Sequel)

- ▶ 'o' -> Open new line under point
- ▶ 'O' -> Open new line above point
- ▶ 'a' -> Append text after the point
- ▶ 'A' -> Append text to the end of line
- ▶ 'R' -> Go into replace mode until <ESC> is pressed

Emacs lisp

Emacs lisp in fifteen minutes

- ▶ Learn it here
- ▶ Source: learnxinyminutes.com/docs/elisp/

The Emacs Operating System

- ▶ "Emacs is a great operating system. . . "

The Emacs Operating System

- ▶ "Emacs is a great operating system, just lacking a decent editor"

The Emacs Operating System

- ▶ "Emacs is a great operating system, just lacking a decent editor"
- ▶ Emacs is known for it's large list of modes written in Elisp
- ▶ What has been done so far:
